

**BENTOS PARTICIPATES IN APEC WORK MEETING ON IMPROVING CONNECTIVITY:
RESILIENCE OF SUBMARINE TELECOMMUNICATIONS CABLES IN THE ASIA-PACIFIC
REGION.**

**Asia-Pacific
Economic Cooperation**

Bali, Indonesia – 15-16 October 2013

BENTOS was invited by APEC as a Chilean expert on submarine cables to discuss the security of submarine telecommunications cables, part of our strategic infrastructure and a subject widely unknown to Chilean society.

The convention was the meeting place for delegates from the APEC economies and experts in submarine cables to identify and discuss barriers to submarine cable based connectivity, to promote practical measures to improve cable protection and resilience and to promote the benefits of ventures formed by private-governmental associations.

The results of this work meeting will be presented in the "Good Practice Guide for Improving the Resilience of Submarine Cables," a guide to be essentially aimed at governmental regulatory agencies, lawmakers and the industry.
